VIBRATION TRAINING

The training program includes theoretical and practical understanding of mechanical simulation and is based on measurements conducted with test benches or from actual cases. The content is constantly improved by our day-to-day activities and experience acquired on the field.

DURATION: 1 day (8h)

The training will include the basics of vibration data collection as well as the implementation of diagnoses and recommendations. The 1-day training includes learning about the features and software of Fixturlaser products.

AUDIENCE: Maintenance teams, foreman, planner, trainers.

PREREQUISITES: Mechanical experience.

OBJECTIVES: Increase knowledge of basics vibration and product usage.

CONTENT:

Module 1: Benefits of condition monitoring
Module 2: The importance of speed
Module 3: The building of a machine
Module 4: The data gathering
Module 5: The automatic diagnostic

Exam- A certificate will be awarded upon successfully completing an examination immediately following the course

A maximum of 9 participants per course is possible.
